Shell suggestion

<u>Suggestion strategy:</u>

- <u>Shell size:</u>

    - Determined by measured **foot-lengths** and selecting next shell

- <u>Shell volume:</u>

    - Determined by statistic **category of foot-widths**:
      normal, wide, narrow, ...

- <u>Customization for skill-levels:</u>

    - "***Advanced***" instead of "*Sportive*":

        - Shell sizes around one size larger
        - Shell volumes slightly wider

    - "***Beginner***" instead of "*Sportive*":

        - Shell sizes around 1.5 sizes larger
        - Shell volume about one category wider
