

Installing / Re-Installing the Drivers

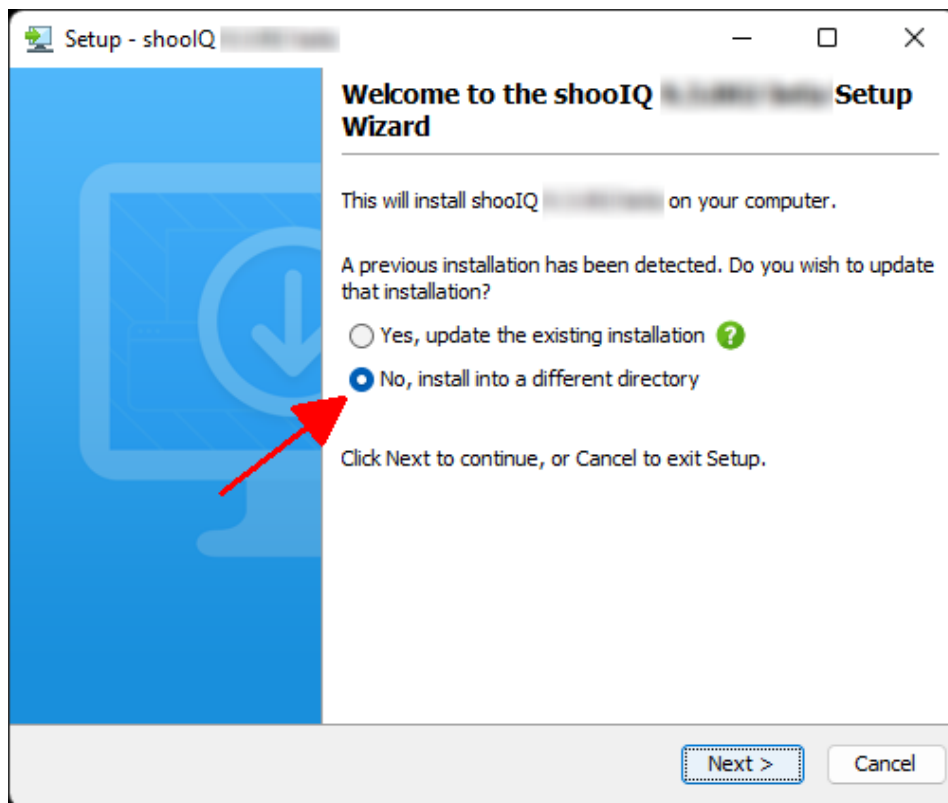

The easiest way to make sure all the required drivers are installed is to simply re-install the shooIQ Software ...

Don't worry: Your personal settings will always be preserved and still be available!

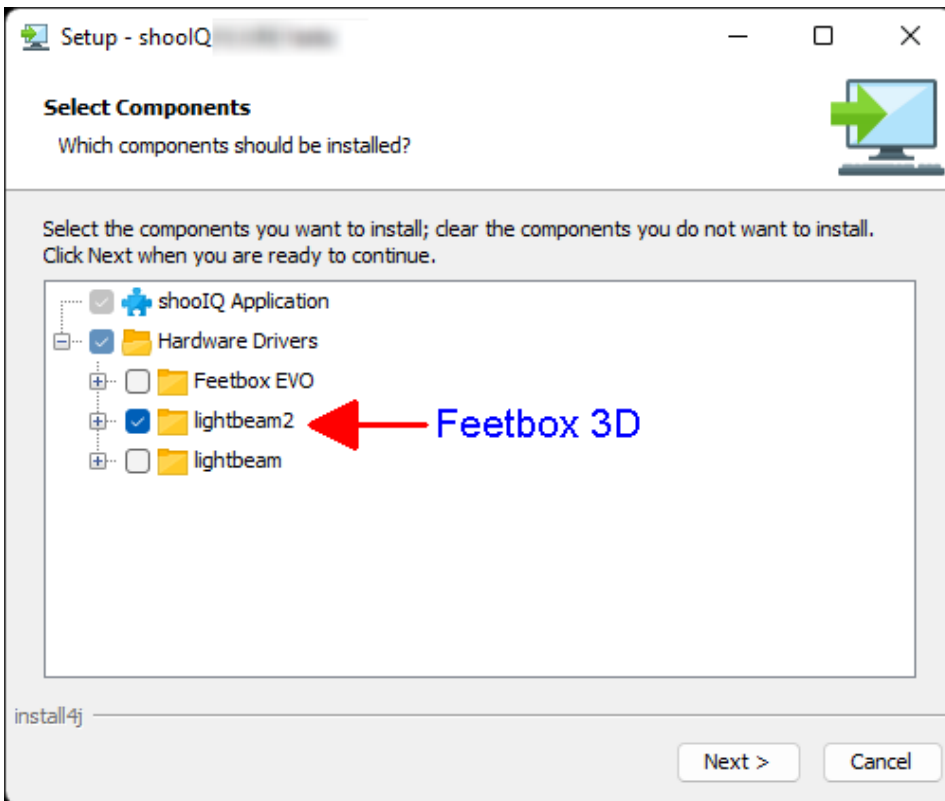

1. Make sure you have an executable installer file available ...
you can also always login to your box account "<https://box.shooiq.com>"
and download the latest version there:

2. Check your machine for custom AntiVirus-Software ...
=> Make sure that your AV-Software is configured correctly and does not interfere with the upcoming driver-installation, e.g. by temporarily disabling it
3. Start the installation by double clicking the installer file ...
 - On the first screen you may see the following option:
=> Please make sure to select "No, install into different directory" (Note: see point "5" below)

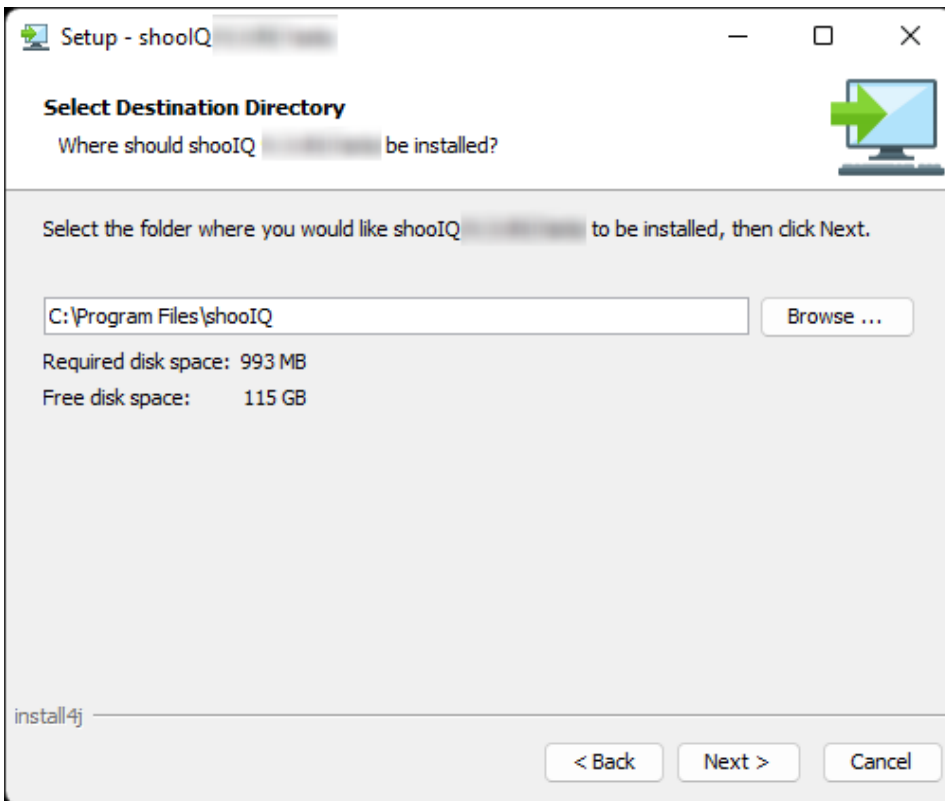

4. Click "Next" until you get to the following screen ...
=> **Select the drivers you want to install / suitable for your device ...**
e.g. "*lightbeam2*" if you're using the Feetbox-3D machine!

5. Click "Next" to continue

The installer will now give you the option to select a different installation target
=> Just leave the pre-selected / default folder unchanged - and press "Next"
(Typically the installation will be located under "C:\Program Files\shooIQ")

6. Now simply finish the installation by pressing "Next" ...
=> During the installation please make sure to allow / grant the driver full-access / administrative-rights if requested
7. Finally we would recommend re-booting the computer once
