shooIQ in a Window

The shooIQ software will start in Fullscreen Mode. For special purposes it is more convenient to have the software running in a window. With the following steps you can configure to start the software in window mode.

Task	Description	
Step 1	Open the file "shooIQ. vmoptions" with a Text Editor	
Step 2	Define the initial Size of the Window and save it. You can easily reset to the standard settings in deleting both -Dframe options.	
Step 3	Start the shooIQ Software	

The image in Step 1 shows a file explorer path: OTCAMP (C:) > Programme (x86) > shooIQ with the following contents under Name:
- .install4j
- client
- drivers
- jre
- runtimes
- utils
- AutoUpdater.exe
- shooIQ.exe
- shooIQ.vmoptions (highlighted)
- uninstall.exe

The image in Step 2 shows the contents of the vmoptions file:

```
# Enter one VM parameter per line
# For example, to adjust the maximum memory usage to 512 MB, uncomment the following line:
# -Xmx512m
# To include another file, uncomment the following line:
# -include-options [path to other .vmoption file]
-Dframe.width=1700
-Dframe.height=1000
```
